

## **Robinson R66 receives EASA certification**

*Date published: 3 May, 2014*

---

Torrance, CA — On April 30, 2014, four years after initial FAA certification, the European Aviation Safety Agency (EASA) issued its type certificate for the Robinson R66 Turbine helicopter. Robinson is pleased to add EASA member states to the now over 50 countries (including Australia, Brazil, Canada, Japan, Russia, South Africa, and the U.S.) that have certified the R66.

EASA certification marks an important milestone for Robinson, as two-thirds of the company's sales have historically come from foreign customers. With certification finally in place, Robinson can deliver its current backlog of European orders and focus on strengthening its presence in the European market. Presently, there are sixteen R66 service centers, of which thirteen are dealers, approved in Europe.

Currently priced at \$839,000 USD, Robinson designed the 5-place R66 to be a mid-size, low maintenance turbine helicopter that would perform as well or better than its competitors, but at a lower cost. To date, Robinson has delivered over 500 R66s and estimates total fleet hours at over 160,000. In response to customer feedback, glass and touch-screen avionics were recently added to the R66's options list.

Founded in 1973, Robinson Helicopter Company is the world's leading manufacturer of civil helicopters. For additional information, visit [www.robinsonheli.com](http://www.robinsonheli.com).
